Thanks all, i had good reply from:

"David Foster" foster@ncmir.ucsd.edu

"Bousquet Francois" Francois.Bousquet@cgi.com

"Geoff Wright" geoff@xp3.co.uk

"Crist Clark" crist.clark@globalstar.com

"Geoffrey Walton" setuid0@mac.com

I get OpenSSL from <http://www.sunfreeware.com>

Hi all,

While trying to install v0.9.7e of openssl on a Solaris 9 machines ,
the build completes fine, but it bombs out during make install and
display followin error :

```
installing fips... making install in fips/sha1... sh: syntax error at  
line 2: `;' unexpected *** Error code 2 make: Fatal error: Command  
failed for target `install' Current working directory  
/usr/local/openssl/fips/sha1 *** Error code 1 make: Fatal error: Command failed for target  
`install' Current working directory /usr/local/openssl/fips *** Error  
code 1 make: Fatal error: Command failed for target `install_sw'
```

The compiler is the Sun Workshop compiler and make as installed in
/usr/ccs/bin/make.

Regards

jimi
