To: <sunmanagers@sunmanagers.org>

I have a domain running 5.8 with Veritas 3.5.

The domain has been running with no problems for 6 months. The domain crash with an error of:

NOTICE: /: mangled entry

NOTICE: /: mangled entry

I found on the system in /tmp a file

```
-rw-rw-rw- 1 root 0 Mar 23 22:03 @MaNgLeD.4907
```

I no one is able to explain this file. There were no one log on the host at the time of the crash.

Thanks

Rich Pollard
