Hi Gurus,

I am having SF V890 server with solaris 9 installed on it. The patch level and the OBP is latest and up to date but the problem is that when i issue the command init 0 as root it waits for some time and again comes to the command prompt (hash prompt) and then nothing happens. So i am not able to get the server to OK prompt using this command.

Has anybody come across the problem?

Can anybody help in this case.

Thanks in advance.

Thanks & Regards,

Mannan
