Hi,

I have a Ultra 1 Model 170 with Solaris 5.5.1

Considering to buy a 2.1GB hard disk to mirror the data on U1. I already have a 2.1GB HDD.

Question: Can this be done by just buying extra HDD or do I have to upgrade OS first? Can existing OS support the mirroring?

What disk mirroring software do I need to buy?

Regards,

Jong-Shyan
