Greetings all. Sorry to bug the list with such a trivial question, but I'm at a loss here and I've Googled around to no avail. I have an Ultra Enterprise 1 I'd like to use for some syslog stuff so I bought a video adapter to plug in an LCD monitor and nothing comes up. Are there any jumper settings or something I should know about it, is there a keyboard combination to get this to work.

LCD_JACK --> ADAPTER --> Ultra1

No dice.

Thanks in advance
