Hi Gurus,

I have Solaris box, in which the /etc/system file is having the following parameters defined :

* Start settings for Patrol and ESM

set semsys:seminfo_semmni=20

set semsys:seminfo_semmns=120

* Semaphore parameters set for Oracle

*

set semsys:seminfo_semmni=4096

set semsys:seminfo_semmns=4096

Can someone tell which parameter values will be taken up by the system ? Is it the greatest value or is it like first come first serve ? Your reply is very much appreciated!!

Thanks & Regards,

Aju
