Hi Gurus,

I have a Sun V440 Server connected with Sun 3510FC. Now a disk(146GB) got failed in a logical drive (Raid 5). It also has a local spare disk, when the system tried to rebuild the data in to spare disk it gave a error "Warning Bad block encountered 136983314(311). I replaced the failed one with new one and did the manual rebuild after 47% of data transfer it is giving the same error.

Pls. help me to solve this issue,

David
