Hi gurus what I am trying to do is allow a user called mp13t to use the command "su - mp13tnet" (by executing the script su_mp13tnet) so that it doesn't prompt for a password. For example I wanted the user mp13t to run the command "su - mp13t_net" as the user root

This is what I tried but it is still prompting for a password

```
vi exec_attr Add su priv:user:cmd:::/export/home/su_mp13tnet:uid=0
```

The file /export/home/su_mp13tnet (owned by root) contains :-
 #!/bin/pfksh
 /usr/bin/su - mp13t_net

```
vi prof_attr Add su priv::Privilege for switching into mp13tnet
```

```
roleadd -d /export/home/mp13tnet_role -c "Role allows su - mp13tnet and  
stop/start service" -P "su priv" \  
-s /usr/bin/pfksh -m mp13tnet_role
```

```
passwd -d mp13tnet_role
```

```
usermod -R mp13tnet_role mp13t
```

Does anyone know if this is possible

tia
