- 

All – I have a 4800 system which is running 5.18.2 and I have to get this upgraded to 5.20.3, thru an ftp server using flash-update from the SC(system controller). Unfortunately I do not have a network connection from the ftp server to this SC, if anyone in this egroup had done this thru a laptop, enabling ftp on the windows/mac laptop, and connecting the same to the system controller and the upgrading the same. I would like to know how this is done, and what are the steps to be followed.

Any help is appreciated.

Thanks

Pratyush
