hi

I'm sharing out my cdrom on my windows box via cgywin for solaris 9 boxes to nfs mount. I can mount (mount ip:/cygdrive/i /cd) and see it fine but it sees it in capitals and shortnames – eg.

ls

```
COMPANIO CONTENT_ DOCUMENT FR_SERVI REPCA  
RR_MOVED UPGRADE_
```

I'm thinking i'm missing an option somewhere but haven't been able to work out where.

Elaine
