Hi All,

When I run a date cmd on 2 different sessions (telnet & ssh) on solaris zoning, I get 2 different output formats (see below). Does anyone know why & how to get my date format output in telnet session to be similar to ssh session? Any helps/suggestions are appreciated.

Using telnet:

```
# date
```

```
Wednesday, July 2, 2008 4:09:00 PM PDT
```

Using ssh:

```
# date
```

```
Wed Jul 2 16:08:33 PDT 2008
```

TIA,
-Chris
