Have a question about the options 'passwd' gives a user:

- 1 Pronounceable passwords generated for you
- 2 A string of characters generated for you
- 3 A string of letters generated for you
- 4 To pick your password

– Is it possible to have one of the options as the default (ie, never show this prompt, always do one of the 4 we set)

– If so, is it possible to change how one of the options generate a password.

What im looking to do is have the passwd program always generate a password of at least 8 characters containing letters & numbers.
