Admins,

Various Alpha servers, DS10, DS20, ES40, ES45

I have been trying to make a serial connection to COM1 (MMJ)  
across the network via a JetStream Terminal Server.

The TS is set to use Reverse Telnet on the relevant port and  
run at 9600 8 N 1. I am having no luck at all.

Can anyone advise me on how to achieve this? TIA

Lawrie
