The good Dr. Blinn took the time to check with the patch kit team. It turns out that most of the kits descriptions DO list the checksums. I happened to be "browsing" for the patches that applied to Tru64 V4.0G/TCR V1.6 and the first patch that appears is SSRT1-69U\_V4.0G and the text file for this kit does NOT have the checksums documented.

I will make a generalization that it looks like if the patch is of the "normal" name format --- T64KIT<patchnumber>-<buildversion>-<type>-date --- hte checksums should be documented in the description file.
