I've kind of answered my own questions, by re-reading the mail and re-checking the docs,
It looks like I will have to get the advfs utility license, addvol to my 2 domains, after first re-doing my ra3000 disks to present 2 seperate disks to unix.

Correct me if Im wrong, but I think thats whats required.

Alan

Subject: Advfs query

I have checked through the documentation, and require some clarification.

I have 2 advfs partitions - /apps and /data on 2 different file domains.

apps_domain#apps /apps advfs.....

data_domain#data /data advfs.....

I am looking to extend these without the need to back up and restore as they are quite large already and downtime is not easy to get.

>From the docs, I see that advfs utilities will allow an addvol to be done.

This will extend the domain, but the partition is mounted on a fileset, so will using addvol to extend the domain allow the extension of the /app directory is a way that is unknown to the users.

eg, will my /apps directory expand from 50Gb to 80Gb.

Also, can you only addvol a full disk, ie a dsk5c partition, or can I use 'g' and 'h' for /apps and /data. If not, I will have to reconfigure my new ra3000 disks.

Thanks,

Update: Advfs query

Alan
