Hi managers,

-running TruCluster V5.1a PK4 on an 2-ES40/HSG80-Cluster
-planning an OS-patch with PK 6 this weekend

In order to do a "rolling patch", I need more space on "cluster_root" !

"cluster_root", "cluster_usr" and "cluster_var" are on mirrored HSG80-disks

Having free space (dsk3g) on the same mirrored HSG80-disks, I tried:

```
# addvol dsk3g cluster_root
```

receiving the message:

```
addvol: error = E_TOO_MANY_VIRTUAL_DISKS (-1145)  
addvol: Can't add volume '/dev/disk/dsk3g' to domain 'cluster_root'
```

Trying:

```
# addvol dsk3g cluster_usr  
worked fine !!
```

Any idea what causes this error ??

Demand for quick response as the patch is scheduled for the weekend,

thanks in advance

Martin Körfer
