Me stupid. Thanks everybody's help!

So, it was a funny scene: the GS could ping the DNS server, the resolv.conf, svc.conf, nsswitch.conf were ok, but nslookup still not reached the server, even when i'm specified it (with nslookup - DNSserver).

You guys do not forget to restart network services! I won't forget any more. Windows style can help sometimes.

Best regards,

Gergely Foti
