Original post:

Is this the right command to create a file domain with a LSM disk?

```
mkfdmn /dev/vol/mydiskgroup/mylsmvolumename myfiledomain
```

Answer:

Yes, it is correct. In this case we upgraded from Tru64 UNIX 4.0g to 5.1b and some of the device information looked different but the syntax remained the same.

Many thanks to John L. Lanier, Thomas Sjolshagen, BL Venkatesh, and Johan Brusche for their speedy responses.
