Hi

We are currently running Tru64 V5.1 732 on a DS10.

I want to start using it as an smtp server (exim) with spamassassin and clamav. My current version of perl (5.005_03) needs upgrading and I imagine there may be other good reasons for moving to 5.1D (is that the current version?).

Does anyone have a similar configuration? I just want to confirm that I am going to be able to install all this software before diving in.

TIA.

Dp.
