I am about to upgrade an old 5.1 box to 5.1A PK6 tomorrow
so I am doing some testing today on a 'decomissioned' DS20

This was on 5.1A already .

I have booted from the 5.1 CD install disk to create a 5.1 system , then I want to do a
installupdate to 5.1A etc.

The problem I am having is the dreaded 'Init: Command is respawning too quickly - Check for possible
errors"

"id: cons "/usr/sbin/getty console console vt100"

It seems that /sbin and /usr won't play.

I have rebooted back to single user , and the root partition is OK on dsk0a

but /usr and /var will not mount (on dsk0d and dsk0g)

Any quick pointers to sort this out?

Would it be the firmware?

Thanks

Steven Frost
