Compaq TCP/IP Services for OpenVMS Alpha Version V5.1 – ECO 3
on a AlphaServer 2100 4/275 running OpenVMS V7.2-1

So far 3 people have been 'reproducibly' unable to email us. 2 are coming from comcast, 1 from worldnet.att.net. No one else from these sites has been trying to send us email so i don't know for sure if the sender is the problem . The bounced messages all have the same status message:

Final-Recipient: rfc822; SOL@ADLDATA.COM
Action: failed
Status: 4.4.7 Unable to contact host for 1 days,
Diagnostic-Code: smtp; Persistent Transient Failure: Delivery time expired
Last-Attempt-Date: 1 Oct 2003 21:02:13 +0000

I am using smtp.config but I don't think anything I can put into smtp.config could have caused this.

We are not having any problems receiving messages from others.
Does anyone know what could be causing this.

thank you
sol gongola
