hello

I've created one account by the authorize utility. I would change the profile of this user to log in, for ex. I dont want to delete some directories, files and change my current directory with "cd" command. How could I do this? is this possible?

on the /lgicmd parameter, i set up some protection access with the file login_sam.com but these command aren't recognized by the system:

```
#!File : login_ftps.com
#!-----
$ set protection=(o:r,s:r,o:r,g:r) /default
```

```
#!show ftp_sam - authorize
UAF> show ftp_sam
```

```
