Of course, there is a version of ZIP with a real VMS CLI and one without.

The CLI version supports the UN*X-like syntax as well.

Almost. It does if the first character is "-". However, as the help screen says, this is not necessarily the case with the unix syntax. In that case, it gives an error.

Hmmm... Don't see any options that don't begin with "-".

What am I missing?

As I said in another post, I meant UNZIP.

Usage: unzip [-Z] [-opts[modifiers]] file[.zip] [list] [-x xlist] [-d exdir]
Default action is to extract files in list, except those in xlist, to exdir;
file[.zip] may be a wildcard. "-Z" => ZipInfo mode (^ unzip "-Z" for usage).
=> define foreign command symbol in LOGIN.COM: \$ unzip := \$dev:[dir]unzip.exe

-p extract files to pipe, no messages -l list files (short format)
-f freshen existing files, create none -t test compressed archive data
