Hello,

We just recently purchased Solarwinds, which has the Orion network performance monitor and other network tools. It has the capability of monitoring memory, cpu, disk, & network traffic on windows based servers.. Does any one know if it can monitor these same fields on an HP9000 rp5405 ? .. and if it can, how do you get it to do so? So far all it lets me monitor is the lan statistics for the hp9000 server...

Thanks

.
