Hi,

I work for a group that primarily uses our servers for statistical analysis. We mostly use SAS, Stata, Matlab, et al.

We're trying to plan for upgrades to our existing older servers (v880s, 440s) and I am wondering if anyone out there has any experience with the T2000 series as replacements for systems that pull this kind of duty.

If so, how does the T2000 compare in performance?
