I am currently using dlpars on aix 5.2 and have a couple of questions;  
first is Fiber/gigabit etherchannel, is it possible with fiber card?  
if not can you set up fiber with fiber 'failover' or fiber to 10/100  
failover [not in hacmp but in etherchannl arena]?

Second is HACMP, anyone use ipaliasing and single net cards on 2 box  
standby-type cluster?

Adam
