I'm trying to update the cdrom firmware before doing a 4.3.3 to 5.1 upgrade. I downloaded the firmware bin file and unzipped it. Then the documentation states to download and use GENUCODE to install it. I tried to find it on the microcode download page but couldn't. I did find a message that genucode is a feature of AIX 5.1 and higher, but I am still on 4.3.3. Other documentation says genucode files should be in the microcode bin file I downloaded, but I only see these files: 40x.readme, IBM_____CDRM00203.06.0 and dsdata.

Does anyone know how to update this microcode on 4.3.3?
