I have to change IP address of my RS/6000 server running AIX 4.3.2 and can't interrupt normal work of users. They have terminals on PC's, where address of ERP server is set as default connection. If I change IP on server, everybody in my LAN will lose their "favourite" application... Please advise me: what is the smoothest way to do it? Is it possible to add second IP address to one ethernet adapter? (I can't see such option in SMIT).

Thanks in advance!

Regards
