Hi Gurus..

I'm setting up an HACMP config on AIX 5.2 ML06, and have loaded HACMP 5.2, with the latest code for Oct. 2005..

I've created a cluster, configured the nodes in the cluster, configured the networks, and the adapters, and then when I try to Synchronize the cluster configuration, I get the following error message :

cldare: Unable to connect to node

and

rshexec: cannot connect to node

I can rcp from one node to another, and from the nodes to themselves

I can also do an rlogin and rsh from one node to another

My /etc/hosts look like the following :

```
node1
node2
node1_priv
node2_priv
```

My /.rhosts looks like the following :

```
node1 root
node2 root
node1_priv root
node2_priv root
```

My /usr/es/sbin/cluster/netmon.cf contains the IP address of the nodes

My /usr/es/sbin/cluster/etc/rhosts file matches my /.rhosts file, which both have the 600 permissions..

cldare: Unable to connect to node

comp.unix.aix: cldare: Unable to connect to node

Any insight would be helpful..

Thanks
