<quote>

Serial communications involve more than just opening a file, and reading from it, such as baud rate and whether or not you need to "dial out" via a modem to establish a connection, or if someone is connecting to your serial port via a modem.

Well, the serial port has already been configured using "smit" for baud rate and other information.

The port has login turned off.

So now, it is just a matter of "opening the file and reading from it"

I am just looking for a simple way to do this.

Thanks,

Eric
