My apologies if this is not the right forum for a job posting.
However, I am in need of a Unix Systems Engineer to do the following:

Primary administration for approx. (15) HMCs
Root password maintenance
Generating monthly metrics reports
Coordination and tracking of standard maintenance updates including the following:

- o Microcode management for AIX servers
- o HP, AIX and SUN software orders
- o Security alerts
- o Obtainment of patches/new releases

Review of all server installations to ensure that the operating system is hardened to our standards
Installation and configuration of Control-SA software on all applicable servers
Maintenance of documentation repositories
Mgt. of our SarCheck agreement including the installation and configuration of the software
Perform any system software changes, updates, installation, etc. that are required across various platforms
Project management
Serve as resource and backup to primary and secondary Unix Systems Engineers

Skills:

3-5 years experience in a networked, multi-platform environment administering AIX, HP-UX and Solaris. Candidate must have advanced knowledge of operating systems, hardware platforms and databases as well as familiarity with communications, programming and supporting software. Candidate should be familiar with administration of servers in an LPAR environment. Candidate must possess the ability to diagnose and resolve complex problems using experience and standard tools. Candidate must possess excellent written and verbal communication skills and the ability to effectively present information and respond to questions from customers and associates at varying degrees of technical expertise

Ability to work both independently and as a member of a team.

Unix Administrator Position Available through COMSYS
