

comp.unix.shell: adding users from a file

adding users from a file

I want to be able to create users with the adduser script built into redhat linux

the file consist of users like this

```
user1
user2
user3
.
.
.
.
user20
```

Then I want to set them a temporary password of something like abc123

and also set their quota limit to be 250mb.

Any ideas?
