I have a file with 150,000+ lines. Text in the file have this pattern:

UPDATE TABLE1 SET ...

The SQL command completed successfully.

UPDATE TABLE1 SET ...

The SQL command completed successfully.

UPDATE TABLE1 SET ...

The SQL command completed successfully.

UPDATE TABLE1 SET ...

No row was found for FETCH, UPDATE or DELETE; or the result of a query is an empty table.

UPDATE TABLE1 SET ...

No row was found for FETCH, UPDATE or DELETE; or the result of a query is an empty table.

UPDATE TABLE1 SET ...

No row was found for FETCH, UPDATE or DELETE; or the result of a query is an empty table.

UPDATE TABLE1 SET ...

The SQL command completed successfully.

UPDATE TABLE1 SET ...

The SQL command completed successfully.

UPDATE TABLE1 SET ...

The SQL command completed successfully.

UPDATE TABLE1 SET ...

No row was found for FETCH, UPDATE or DELETE; or the result of a query is an empty table.

UPDATE TABLE1 SET ...

No row was found for FETCH, UPDATE or DELETE; or the result of a query is an empty table.

Splitting file

..
..
..

What I need to do is to make two files by moving all double lines (after an empty line) to one file and all tripple lines to another file.

So, one file has:

```
UPDATE TABLE1 SET ...
```

The SQL command completed successfully.

```
UPDATE TABLE1 SET ...
```

The SQL command completed successfully.

..
..
..

and another file has:

```
UPDATE TABLE1 SET ...
```

No row was found for FETCH, UPDATE or DELETE; or the result of a query is an empty table.

```
UPDATE TABLE1 SET ...
```

No row was found for FETCH, UPDATE or DELETE; or the result of a query is an empty table.

..
..
..

What command should I use to achieve this...Thanks for your help.
