"All the rivers run into the sea; yet the sea is not full; unto the place from whence the rivers come, thither they return again."

The person who wrote that part of the Bible evidently understood it. If scientists later came up with a testable hypothesis and proved it be correct then that says nothing about the existance of a God. In fact, as religions don't generally provide testable hypothesizes about their belief systems then their validity cannot be proven either way.

Personally, I believe that the Scalable Processor Architecture is divine and the filthy sinners who persist in using unholy microprocessor architectures will burn in the depths of hell. There is isn't a shred of evidence to say I'm wrong ^\_^.

If they really wanted to prevent excessive bleeding then they wouldn't circumcise the poor babies at all \_-\_-.
