Michael Laajanen wrote:

What is the spec of the machine? What version of Solaris?

Ohh sorry, S10 u1 on a Blade 2500(2x1.6GHz)

That almost certainly means the issue is nothing to do with the one I had on Mathematica.

Also, after upgrade to S10 from S9 and Staroffice 8 when I log in with language USA ISO8859-1 I can't write Swedish å, I can write öä but when I write å it hangs and I must kill it!

The login environment I have is not changed!

I'm English and have no experience of these sorts of issues. You could try log out, get to a command line login and try:

```
mv $HOME/.dt $HOME/.dt.bak
```

then log in again. If it does not clear the problem, just move it back.

Someone else will no doubt have a more useful suggestion.
