Hi Everyone,

I was wondering if someone might be able to help me out. I am setting up a jumpstart environment for the first time and my test install is hanging. Below is what happens when I perform a jumpstart install on a test machine:

```
[Begin Output]
ok boot net - install
Boot device: /pci@1f,0/pci@1,1/network@1,1 File and args: - install
Timeout waiting for ARP/RARP packet
Timeout waiting for ARP/RARP packet
2aa00
Requesting Internet address for 8:0:20:b2:e8:3b
SunOS Release 5.9 Version Generic_118558-11 64-bit
Copyright 1983-2003 Sun Microsystems, Inc. All rights reserved.

whoami: no domain name
Configuring /dev and /devices
Using RPC Bootparams for network configuration information.
SUNW,hme1 : No response from Ethernet network : Link down -- cable problem?
SUNW,hme1 : No response from Ethernet network : Link down -- cable problem?
Skipping interface hme1
Configured interface hme0
Searching for configuration file(s)...
[End Output]
```

It never proceeds beyond this point. Does anybody know what it is specifically looking for at this point? I have spent a good amount of time searching the internet for solutions but haven't found much. Any help at all would be greatly appreciated. Thanks in advance.

Chris
